5. (original) The method of claim 4, wherein the information related to the asset includes data corresponding to each component part.

6. (cancelled)

7. (original) The method of claim 1, wherein the asset is a multi-vendor asset.

8. (original) The method of claim 7, wherein the information related to the asset includes data corresponding to each sub-asset and data identifying each vendor providing a sub-asset.

9. (original) The method of claim 1, wherein the information related to the asset includes data identifying a manufacturer of the asset.

10. (cancelled)

11. (cancelled)

12. (cancelled)

13. (original) The method of claim 1, wherein the information related to the asset includes documents associated with the asset.

14. (previously presented) The method of claim 13, wherein the documents consist of at least one of the following: parts lists, warranties, service agreements, user manuals, insurance, licenses or contracts, or specifications.

15. (cancelled)

16. (cancelled)

17. (original) The method of claim 1, wherein the asset is a physical asset.

18. (previously presented) The method of claim 1, wherein the asset is a financial asset.

an electronic interface for managing read and write privileges to a plurality of entities having an interest in the asset; and

an electronic interface for providing access to the various attributes to the a plurality of entities, wherein an entity having write privileges for a first attribute of the asset can write data related to a change in the first attribute of the asset, and an entity organization having read privileges for a second attribute of the asset can read data related to the second attribute.; and

~~a network providing a link between the plurality of entities and the asset registry.~~

53. (cancelled)

54. (currently amended) The system of claim 52, wherein one of said electronic interfaces is accessed via an electronic the network. is the Internet.

55. (previously presented) A system for recording information related to an asset and providing access to the information to interested entities, the system comprising:

means for recording information related to the asset;

means for categorizing the information into various attributes;

means for managing read and write privileges to entities having an interest in the asset; and

means for providing access to the various attributes of the asset to the entities having an interest in the asset, wherein an entity having write privileges for a first attribute of the asset can write data related to a change in the first attribute of the asset, and an entity having read privileges for a second attribute of the asset can read data related to the second attribute.

56. (previously presented) The system of claim 55, wherein the means for recoding information records information related to changes in status of the asset.

57. (original) The system of claim 55, wherein the means for recording information records information related to transactions that have an effect on the asset.

58. (original) The system of claim 57, wherein the means for recording information records documents related to the transactions.

59. (original) The system of claim 57, wherein the means for recording information records information related to the entities participating in the transactions.

60. (original) The system of claim 55, wherein the means for recoding information records information related to the entities having an interest in the asset.

61. (original) The system of claim 57, wherein the means for providing access to the various attributes of the asset includes means for authenticating the entity desiring access.

62. (cancelled)

63. (cancelled)

64. (previously presented) The method of claim 1 wherein the various entities comprise entities from at least two different organizations, each organization having different legal or financial interests in the asset.

65. (previously presented) The method of claim 1 wherein an asset is anything that can be legally owned and for which ownership can be legally transferred.

66. (previously presented) The method of claim 1 wherein one of the attributes is legal ownership.

85. (new) One or more computer-readable memories containing one or more computer programs, sub-programs or instructions that is executable by one or more processors or computers to perform the method recited in claim 1.

86. (new) The system of claim 52 wherein the means for recording and categorizing asset information and for managing read and write access privileges to said data is embodied on one or more computer-readable memories containing one or more computer programs, sub-programs or instructions that are executable by one or more processors or computers.

87. (new) One or more computer memories collectively containing a dimensional or object database data structure for recording and categorizing information related to assets, and for managing read and write privileges or access to the asset information, produced by the method of claim 1 comprising:

- an asset identification table or object containing a unique identifier for each asset ;
- an asset attribute table or object containing categorized asset attributes; and
- one or more privilege or access tables or objects for each asset that represent for each asset, the access privileges of entities to information pertaining to that asset stored in said database structure, wherein said privilege or access table or objects are utilized by one or more processors or computers to grant read and write privileges to entities.

88. (new) The method of claim 1 wherein the recording information related to an asset and the providing access to asset attributes to entities that have an interest in the asset is accomplished using one or more processors or computer devices

89. (new) One or more computer-readable media having thereon computer or processor executable instructions for recording information related to an asset and managing access to the information to interested parties, comprising instructions for :

recording information related to the asset, wherein the information is associated with a unique identifier;

categorizing the information related to the asset into multiple attributes;

managing read and write privileges to the asset registry for a plurality of entities; and

providing access to asset information to entities that have an interest in the asset,

wherein an entity having write privileges for a first attribute of the asset can write data related to a change in the first attribute of the asset to the asset registry, and an entity having read privileges for a second attribute of the asset can read data related to the second attribute.
